

PDF Instructions - Illustrator

When creating a new document that will print to the edge you need to add bleed.
Keep all live copy at least 1/8" away from the trim.
Color Mode should be CMYK.

If the job is supposed to bleed and the document is not set up to include it, uncheck "Use document bleed settings" and add .125 to all sides, otherwise leave it checked.

If the job is supposed to print in pantone colors leave them as spot. If the job is going to print CMYK make sure pantone colors are set to process.
